Education

Cornell University

Ithaca, NY

B.A. in Computer Science, College of Arts and Sciences

Relevant Coursework: Data Structures, Systems, Functional Programming, Discrete Mathematics, Human-Computer Interaction, Computational Genetics

Experience

CodeArena

Feb 2026 - Current

Co-Founder & Head of Product

- Building a PvP coding interview preparation platform centered on real-time head-to-head problem solving designed for modern technical interview formats.
- Leading product strategy including gameplay mechanics, ranking systems, and feedback loops to drive engagement and learning outcomes.
- Conducted user discovery interviews with engineering students and early-career developers to identify shortcomings in existing interview prep platforms.
- Designed early product analytics and experimentation frameworks to evaluate engagement, match completion, and user retention.

Cornell Creative Technology Lab

Feb 2026 - Current

Senior GenAI Fellow

- Leading a university-wide research initiative examining how Cornell students integrate generative AI into academic workflows, supported by a Google-funded research grant.
- Designing mixed-method studies combining surveys, behavioral data, and interviews across multiple Cornell departments.
- Collaborating with faculty, administrators, and research teams to identify adoption patterns, productivity gains, and risks in GenAI-assisted learning.
- Translating research findings into strategic recommendations for responsible AI integration in educational environments.

OpenAI ChatGPT Research Lab

October 2025 - Current

Product Research Intern

- Analyzed usage data from hundreds of students across institutions to evaluate adoption, failure modes, and misuse risks of emerging ChatGPT learning features.
- Conducted qualitative user interviews and synthesized insights with quantitative signals to inform feature prioritization and UX tradeoffs.
- Translated system behavior and research findings into product recommendations focused on trust, clarity, and measurable learning outcomes.
- Delivered structured research insights that informed product and design iteration cycles.

Entomological Data Science Lab

Sept 2025 - Current

Software Engineer

- Developed tooling to extract structured ecological data from large volumes of unstructured scientific literature.
- Balanced model accuracy, interpretability, and usability when iterating on extraction pipelines.
- Reduced time required to convert raw literature into usable datasets for downstream ecological analysis.

Projects

Scrapbook (HCI and Accessibility Product)

- Designed and built an accessibility-first journaling product emphasizing low-friction onboarding and intuitive interaction flows.
- Conducted user testing sessions to evaluate usability and iterated on interaction design to improve task completion and engagement.

Skills

- **Product:** user research, feedback synthesis, PRDs, experiment design, product metrics
- **Technical:** Python, Java, SQL, R, data analysis,
- **Tools:** Figma, Git, Notion, Google Sheets, Jupyter
